

Fine-tuning LLM

Created @September 7, 2025 10:49 AM

Digging into the data

There are 6 steps to get deep into the data.

1. Investigate: Understanding the dataset, what fields are there. How well populated is the data. what sort of data quality issue there is.
2. Parse
3. Visualization
4. Assess Data Quality
5. Curate
6. Save

How will we evaluate performance?

How do we decide whether or not we have reached our goal?

There are:

1. Model-Centric metrics
2. Business-centric metrics
